Dresser Measurement

Dresser™ IMCW2-T+Log with Digital Temperature Probe

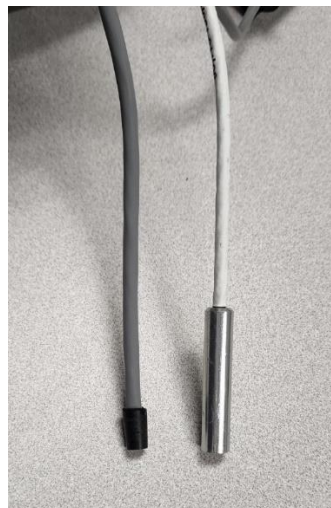

May 17, 2023

Product Update Notifications provide information about updates, enhancements, improvements, certifications, and other changes to current Dresser™ Measurement Products and Services. The information in these notices is intended to help you take advantage of the continuous product improvements.

Product Update Overview

Temperature measurement on the Dresser™ Micro Corrector, Model IMCW2-T+Log has transitioned from analog to digital. With the internally mounted digital temperature probe, the IMCW2 continues to deliver the same highly accurate and stable temperature measurement our customers have come to expect from this product. The photo below shows the different look of the new digital temperature probe versus the analog sensor.

New Digital Probe (Left) Older Analog Probe (Right)

In the very near future, we will begin shipping the IMCW2-T+Log units with the digital probe. Here are a few points to be aware of:

- The internally mounted digital temperature probe will have a new part number – that is Dresser Part Number 062929-010.

- The Dresser Part Numbers for the Assembly #400 IMCW2-T+Log units and the complete IMCW2-T+Log meters are not changing – they will remain the same as they are currently.
- Because the circuit board has been updated to accommodate digital sensors, the digital probe cannot be retrofitted to IMCW2's that have previously shipped with the analog board/temperature probe.
- We will retain a certain amount of inventory on the older analog probes should a customer require a temperature probe for replacement or repair on an existing analog IMCW2 unit.

NOTE: This product enhancement does not presently affect the IMCW2-PTZ+Log or IMCW2-PTZ+Log-dp products. Until further notice, these products will continue to utilize the analog internal temperature probe.
