

CL838 Series

Twin Parallel Flow Service Regulators

The CL838 series regulators is a single valve body regulator with large twin diaphragm cases that are pilot loaded to insure a high degree of accuracy during fixed factor measurement. This regulator is ideal for commercial and industrial service regulator applications when installed in compliance with D.O.T. regulations. The CL838 requires an inlet pressure of only 0.5 PSIG above outlet pressure.

Benefits

- » Parallel regulation with regulator and monitor in continuous operation
- » Combined unit saves space and eliminates extra piping
- » Designed to meet D.O.T. service regulator safety standards
- » Accurate, reliable, versatile

Models

- » CL838-1 – Maximum inlet pressure is 150 PSIG; outlet pressure range 6" W.C. to 5 PSIG; orifice size 3/8" to 1 3/8"
- » CL838-2 – Maximum inlet pressure is 150 PSIG; outlet pressure range from 1 PSIG to 30 PSIG; orifice sizes available from 3/8" to 1 3/8"
- » CL838D-1 – (Downstream) Maximum inlet pressure 150 PSIG; outlet pressure range 6" W.C. to 5 PSIG with closed throat and equipped for downstream control tap. This unit is used when it is desirable to control the regulator from a downstream sensing point other than the regulator valve body outlet side

- » CL838D-2 – Maximum inlet pressure is 150 PSIG. Outlet pressure range is from 1 PSIG to 30 PSIG. All other facets of the CL838D-2 are the same as the CL838D-1 regulator. Orifice sizes available are 3/8" through 1 3/8"
- » CL838M-1 – Regulator for monitor installation with closed throat and o-ring seal on the valve stem at the throat to assure positive downstream control when installed ahead of the operating regulator. This unit provides an operating safety device which assumes control over the operating regulator when failure is sensed by the monitor control line. The monitor regulator is set to take over control from the operating regulator with only a slight increase in outlet pressure. Orifice sizes 3/8" through 1 3/8" and outlet pressure range from 6" W.C. to 5 PSIG. And inlet pressures of 150 PSIG max
- » CL838M-2 – Regulator for monitor installations. All facets of this regulator are the same as the CL838M-1 except the range of outlet pressures which are from 1PSIG to 30 PSIG
- » CL838IM – is a single valve body regulator with large (12 1/16" dia.) twin diaphragm cases pilot loaded to insure a high degree of accuracy during fixed factor measurement. The internal monitor features the safety advantage of a second gas tight backup seat if the normal orifices' face and valve seats fail to contain the outlet pressure at the adjusted outlet pressure level. It also controls the gas flow between the failed open flow and no flow conditions, thus creating secondary regulation
- » CL838IM-1 – has a maximum inlet pressure of 125 PSIG and an outlet pressure range from 6 inches of water column to 5 PSIG. Orifice sizes are available from 3/8" to 1"
- » CL838IM-2 – has a maximum inlet pressure of 125 PSIG and an outlet pressure range from 1 PSIG to 30 PSIG.

SHIPPING WEIGHT

One regulator per box

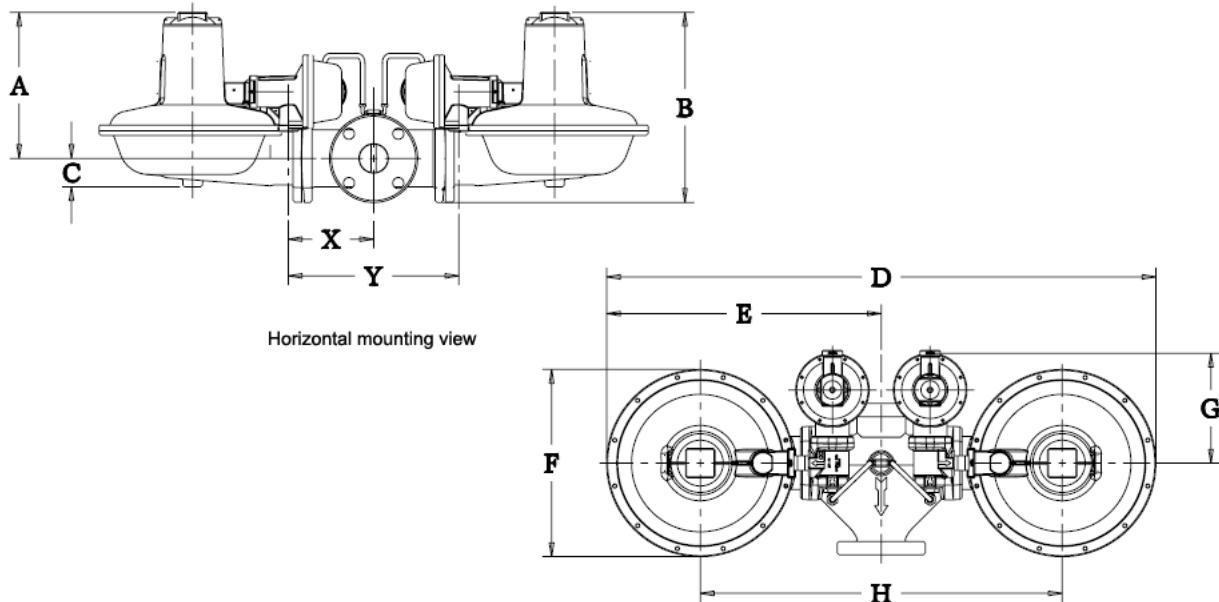

Size	Box weight
2" x 2" NPT	88 lbs.
2" x 2" Flanged	98 lbs.
2" x 3" Flanged	115 lbs.
2" x 4" Flanged	125 lbs.

CL838 DIMENSIONS

Valve body FF	A	B	C	D	E	F	G	H
Screwed, 9" Flanged, 10"	9-5/8	13	2-3/16	37-3/4	18-7/8	12-3/4	7-3/8 (max.)	25

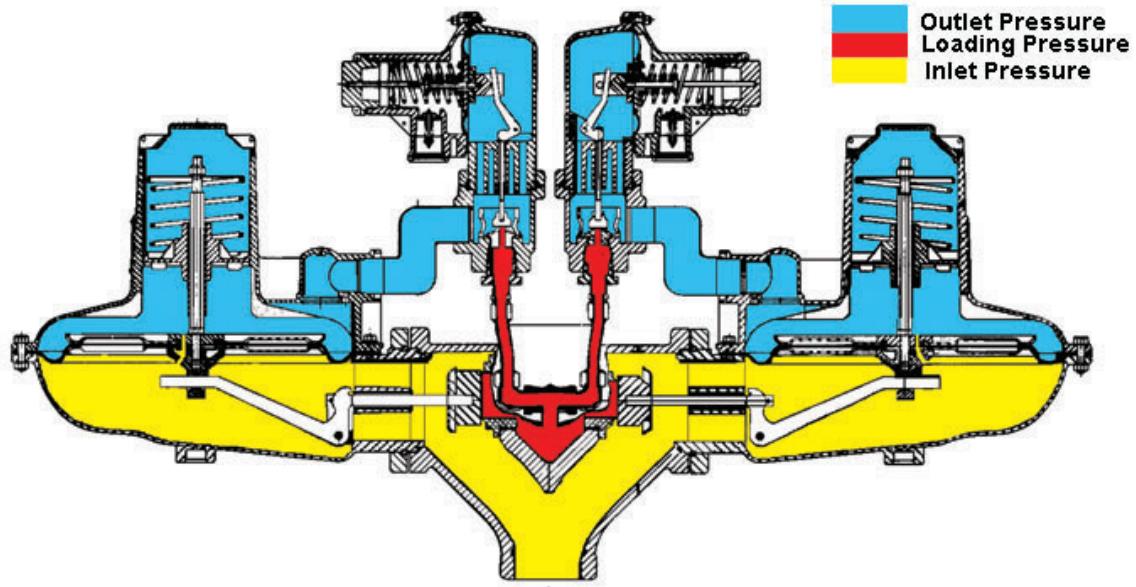

PILOT DIMENSIONS

Pilot	X	Y
1	6-1/2	13
2	6-3/4	13-1/2

Blue	9.0 - 29 PSIG	9.0 - 29 PSIG	9.0 - 29 PSIG
Silver	25 - 30 PSIG	25 - 30 PSIG	25 - 30 PSIG

Notes

*Spring ranges are approximate and may vary by application.

1 The maximum recommended outlet pressure from a CL-838-1 and CL-838-1IM is 5 PSIG.

2 The maximum recommended outlet pressure from a CL-838-2 and CL-838-2IM is 30 PSIG.

Springs are not interchangeable between the CL838 and CL838IM.

CL838 INTERNAL MONITOR CLOSING SPRING DATA

OPERATING TEMPERATURE

- » • -20°F to 150°F
- » • Silicone valve seats available for applications below -20°F

ADDITIONAL SPECIFICATIONS

Available pilot vent sizes	3/4"
Loading ring position	For outlet pressure > 1 PSIG: 0° For outlet pressure < 1 PSIG: 25°
Other available options	Seal wire to indicate unapproved tampering
	1/4" pipe plug tap on upstream side of valve body
	Pilot supply line filter (contact ROOTS Regulators, Owenton KY for specifications)
	Stainless steel supply line fittings

CONSTRUCTION

ROOTS Regulators takes pride in delivering American made products with the utmost concern for safety, quality, and customer satisfaction.

Construction material	
Valve bodies	High tensile strength cast iron (ASTM A-126, Class A)
Orifices	Brass
Valve seats	Buna-N
Valve stems	Nylon
Lever pins	Stainless steel (type 303)
Levers	Zinc and dichromate plated steel (AISI C1010)
Upper diaphragm plates	Zinc and dichromate plated steel (14-gauge steel)
Lower diaphragm plates	Die cast aluminum (ASTM B-85 Alloy SC84A)
Diaphragms	Buna-N reinforcing fiber
Vent valves/seats	Neoprene
Vent screen	Stainless steel (16 mesh)
Adjustment ferrules	Aluminum
Seal caps	ABS plastic
Diaphragm cases	Die cast aluminum (ASTM B85 - Alloy SC84A)
Valve stem inserts	Aluminum

VALVE BODY SIZES

Inlet	Outlet	SCR	Flanged
2"	2"	X	X
2"	3"		X
2"	4"		x

X indicates the valve body is available in that configuration.

CORRECTION FACTORS FOR NON-NATURAL GAS APPLICATIONS

The CL838 may be used to control gases other than natural gas. To determine the capacity for gases other than natural gas, multiply the values within the capacity tables by a correction factor. The table below lists the correction factors for some of the more common gases.

Gas Type	Specific Gravity	Correction Factor (CF)
Air	1.00	0.77
Butane	2.01	0.55
Carbon Dioxide (Dry)	1.52	0.63
Carbon Monoxide (Dry)	0.97	0.79
Natural Gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air-Mix	1.20	0.71

To calculate the correction factor for gases not listed in the table above, use the gases' specific gravity and insert it in the formula listed below:

$$\text{Correction Factor (CF)} = \sqrt{\frac{SG_1}{SG_2}}$$

Where: SG1 = Specific gravity of the gas in which the capacity is published.

SG2 = Specific gravity of the gas to be controlled.

Wide Open Flow Calculations

For wide-open orifice flow calculations use the following equations:

$$\text{For } \frac{P_1}{P_2} < 1.89 \text{ use: } Q = K\sqrt{P_2(P_1 - P_2)} \quad \text{For } \frac{P_1}{P_2} > 1.89 \text{ use: } Q = \frac{KP_1}{2}$$

Where: P1 = Absolute Inlet Pressure (PSIA)

Q = Flow Rate (SCFH)

P2 = Absolute Outlet Pressure (PSIA)

K = Orifice Coefficient (SCFH/PSI)

125	30 or less	38.1	62.8	86.6	109.0			

Notes

Maximum recommended inlet pressure (PSI to inches regulation) left of heavy black line.

Set point at each outlet pressure was 500 cfh.

Loading ring set at 0° for PSIG outlet pressures. Loading ring set at 25° for inches w.c. outlet pressures. Exact settings may vary with individual applications of pressures and load conditions.

K factors are wide open for each orifice size.

 Do not operate orifice in shaded inlet pressure area.

PRINCIPLE OF OPERATION

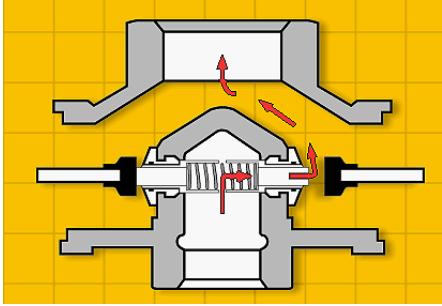

A. Normal regulation

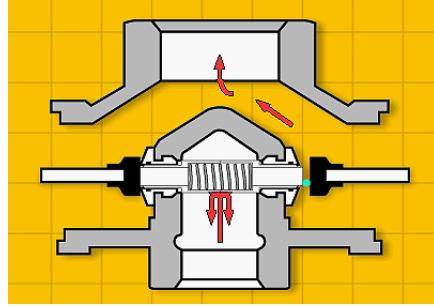

B. Normal lock-up

C. Dual monitor operation, internal foreign material failure

D. Single monitor operation, full internal diaphragm case failure

E. Total lock-up

PRINCIPLE OF OPERATION

A. Normal regulation. The internal monitor orifice operates like a standard one-piece orifice, performing normal regulation.

B. Normal lock-up. The regulator is free to lock-up in the usual manner. The O-ring seal prevents gas from leaking past the orifice exterior into the downstream or low pressure side of the valve body.

C. Dual monitor operation, internal foreign material failure. If the regulator fails to lock-up for any reason, the internal monitor orifice automatically goes into operation. Outlet pressure increases slightly, causing the valve seat to push against the inner or sliding part of the orifice gradually compressing the monitor spring and closing the secondary or monitor orifice on the inlet side of the sliding orifices. At this point, the CL838-IM functions as a monitor regulator. For example, assume a weld bead is caught between the orifice and the valve seat while the regulator is in high-flow operation. If the flow is reduced, the valve tries to close but can't due to the foreign matter. The outlet pressure increases approximately 2" w.c. above the original set point which starts to close the secondary monitor orifice. If the gas demand is decreased, the monitor orifice will partially close and become the new operating orifice. The new orifice will function as a monitor regulator and keep the outlet pressure approximately 3" above the set pressure on inches water column, or .8 PSIG when set for PSIG outlet. If the flow becomes further reduced to no-flow, then the sliding orifice (or orifices) close against the secondary rubber seat providing a complete no-gas flow with a total outlet pressure build-up of only 6" w.c. above the original set point.

D. Single monitor operation, one full internal diaphragm case failure. If the diaphragm case is damaged on one side of the piping such that the lever and valve seat cannot move to close against the orifice face, the outlet pressure builds (as described in C) on the good regulator and its sliding orifice moves to contact the non-movable failed orifice monitor seat. Closing or lock-up will be restricted according to flow demand. Since only one diaphragm is in operation, the outlet overpressure will be approximately 4" w.c. higher on single monitor operation than normal regulation set.

E. Total lock-up. If demand for gas downstream of regulator is zero, the sliding orifice (or orifices) will close against the secondary rubber monitor seat and lock-up the gas flow completely.

CL838 IM-1 PERFORMANCE CURVES

1 PSIG Set Point*

Inlet size	2" Flanged
Outlet size	4" Flanged
Orifice size	3/4"
Inlet pressure	20 PSIG
Spring range	Silver/white (pilots), green closing
Position no.	Horizontal
Bolt circle diameter	12-1/16"

* Set point 1 PSIG with 40 PSIG inlet @ 500 SCFH. All test results are reported at a base of 14.7 PSIG at 60° F and with 0.6 S.G. gas. Loading rings at 0 degrees.

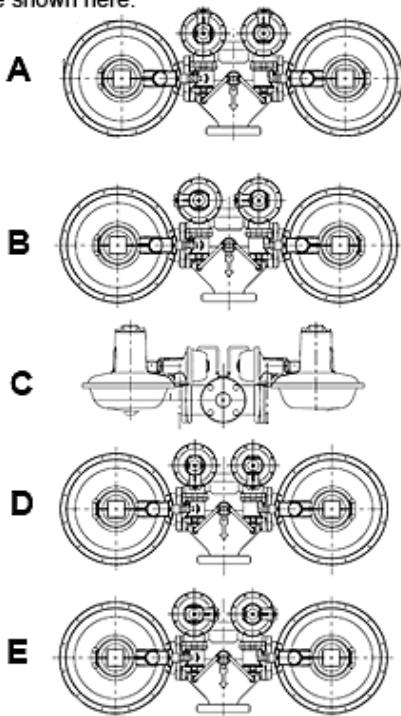

A. Normal regulation

B. Failed with foreign particle.

C. Failed with eroded valve seat.

ASSEMBLY POSITIONS

The six basic assembly positions are shown here.

Please specify the assembly position by letter designation when ordering.

CL838 R, N, D, AND M PARTS LIST

Part Number	Description
753418SU	Main upper diaphragm case
760083	Main case seal cap
736011	Adjustment screw guide assembly
765607	Main case seal cap gasket
769250	Badge
755071	Drive Screw 2 x 1/8
765211	Valve seat
761731	Deflector
751933	Retainer plate
755721	Retainer plate snap ring
755223	Lever pin screw
754836	Pin lever
766301	Main case diaphragm
76104102	Upper diaphragm plate
756077	Lower diaphragm plate
754361	Main case stop stem
755115	Set screw, lower diaphragm plate
761471	Closing spring guide
761083	Secondary diaphragm plate
755531	Hex plated nut 5/16-18, main diaphragm assembly

	Closing spring, please specify
762341	Orange closing spring
762351	Brown closing spring
762353	Green closing spring
762355	Black closing spring
	Valve body, please specify
750957	2 x 2 valve body

700206	Green/white
Pilot parts	
752311	Lower diaphragm case CL 1 & 2 pilot as match
761201	Lever CL1 pilot
754021	Aluminum valve stem CL1 pilot
765021	Standard pilot valve seat
751955	Pilot retainer plate
755725	Retainer ring, pilot retainer plate
754832	Pin lever
750044	VB 3/4 x 1, 90°
757255	1/8" brass, pilot orifice
761753	White 2-hole loading ring
765753	Gasket valve body
755378-001	5/16 - 18 x 1 - 1/8" Hex head slotted
755175-001	10-24 x 7/8 SOC HD
755855	Lock washer, .190 split
800047	CL1 pilot diaphragm support
715078	CL1 pilot lower case assembly
760217	CL1 adjustment screw, aluminum
760053	CL1 pilot seal cap
765503	O-Ring, 021 CL1 seal cap
762935	3/4" CL1 pilot vent screen
754806	Valve disc pin CL1 pilot vent
762651	Standard CL1 vent spring
765181	Vent valve disc, no hole CL1 pilot
753027	CL1 pilot UP diaphragm case
765685	CL1 pilot vent valve seat
710031	UP case assembly CL1 pilot, no breath
755141-001	8 - 32 x 5/16 Phillips head screw lever pin/diaphragm support bracket
766010	CL1 diaphragm, pilot
720043	CL1 diaphragm assembly, pilot, 14" relief
76100202	Upper diaphragm plate CL1 pilot
756021	Lower diaphragm plate CL1 pilot
762051	14 IWC, Relief spring CL1 pilot
75490601	Stop stem guide bushing CL1 pilot
CL1 Adjustment spring, please specify	
762013	Blue/white
762017	Silver/white
762021	Yellow/white
762027	Red/white
762029	White
762034	Yellow/blue
762117	Dark green
762119	Lt. green
762129	Silver
730003	Seal cap assembly

715028	CL2 pilot lower case assembly
760201	CL2 pilot adjustment screw
765603	CL2 pilot seal cap gasket
762905	CL2 pilot spiral vent screen
75572701	RTNG ring, vent
753044	UP diaphragm case
730101	Vent valve assembly
710044	UP case assembly
760201	Adjustment screw
765603	Seal cap gasket
762905	Spiral vent screen
75572701	RTNG ring, CL2 pilot vent
753044	CL2 pilot UP case assembly
730101	CL2 pilot vent valve assembly
710044	CL2 pilot UP case assembly
755141-001	8 - 32 x 5/16" Phillips head lever pin screw
766031	CL2 pilot diaphragm
720041	Diaphragm assembly CL2 pilot, brown spring
761011	CL2 pilot upper diaphragm plate
756001	CL2 pilot lower diaphragm plate
755191	1/4 x 1.25 Shiledscrew, CL2 stop stem
761411	CL2 pilot relief spring guide
762081	Relief spring, brown
765711	Relief valve seal gasket CL2 pilot
756005	Diaphragm plate screw CL2 pilot
755001	Roll pin for lower diaphragm plate CL2 pilot
CL2 pilot adjustment spring, please specify	
762401	Brown, relief
762403	Green, relief
762405	Black
762407	Blue
762409	Silver
762417	Green/white
755821	Diaphragm anti-friction washer CL2 pilot

SPECIAL TOOLS

Part No.	Description
799027	Machined orifice wrench
799051	Adjustment wrench
768481	Filter-control line
768485	Filter, control line PIF-640 3/4"
80002001	Seal wire, no lead
80002002	Seal wire, no lead, 24

Notes:

1. CL838 IMN parts are identical to CL838N parts except for the orifice assembly.
2. CL838 IMR parts are identical to CL838R parts except for the orifice assembly.
3. CL838 IMRV parts are identical to CL838R parts except for the orifice assembly.

TORQUE SPECIFICATIONS

Retainer Plate Screws	100 in. lbs.
Orifice	600 in. lbs.
Orifice (IM)	300 in. lbs.
Margin screws (item no.648)	50 in. lbs.
Margin screws (item no. 64A)	30 in. lbs.

VENT LINES FOR REGULATORS

When constructing vent lines to be attached to regulators installed indoors, follow a few basic rules:

- a. Never use pipe sizes smaller than the vent size; smaller pipe sizes restrict the gas flow. If a long gas run must be used, ROOTS Regulators advises increasing the pipe one nominal size every ten feet to keep the flow restriction as low as possible.
- b. Keep the vent line length as short as possible to minimize the restriction and reduce the vent's tendency to cause regulator pulsation. c. Support the vent pipe to eliminate strain on the regulator diaphragm case.
- c. Always point outdoor vent pipes in the downward position to reduce the possibility of rain, snow, sleet, and other moisture entering the pipe. Install a bug screen in the end of the pipe.
- d. Do not locate the vent line terminus near windows, fans, or other ventilation equipment. See the installation instructions furnished with the regulator.
- e. Adhere to all applicable codes and regulations.
- f. If your vent pipe causes regulator pulsation, consult your sales representative or manufacturer.
- g. ROOTS Regulators strongly recommends running a separate vent line for each regulator. Headers with various installed devices can cause regulator malfunction.

Caution Ensure the end of the vent line is away from ANY potential ignition sources. It is the installer's responsibility to verify the vent line is exhausting to a safe environment.

INSTALLATION

Warning ROOTS Regulators does not endorse or warrant the completeness or accuracy of any third party regulator installation procedures or practices, unless otherwise provided in writing by ROOTS Regulators. Follow your company's standard operating procedures regarding the use of personal protection equipment (PPE). Adhere to guidelines issued by your company in addition to those given in this document when regulators are installed.

- a. Remove all shipping plugs from the regulator inlet, outlet, and vent before installation.
- b. Verify the piping interior and regulator inlet and outlet are clean and free of dirt, pipe dope, and other debris. Dirt and other foreign materials entering the regulator can cause a loss of pressure control.
- c. Apply pipe joint sealant to the male pipe threads. Do not use pipe joint material on the regulator's female threads. Joint sealant could become lodged in the regulator and cause a loss of pressure control.
- d. Gas must flow through the regulator's valve body in the direction cast on the regulator body. Gas flowing in the wrong direction can overpressure and cause damage to the regulator.
- e. The pilot diaphragm casing can be mounted in any position relative to the body through a full 360° angle at 90° increments.
- f. When the regulator is installed OUTDOORS, the vent must always be positioned so that rain, snow, moisture or foreign particles cannot enter the vent opening. ROOTS Regulators recommends positioning the pilot vent downward to avoid entry of water or other matter which could interfere with the proper operation of the regulator. The vent should be located away from building eaves, window openings, building air intakes and above the expected snow level at the site. The vent opening should be inspected periodically to insure it does not become blocked by foreign material as outlined in DOT PHMSA-RSPA-2004-19856.
- g. When the regulator is installed INDOORS, the vent must be piped to the outside atmosphere using the shortest length of pipe, the fewest possible pipe elbows, and a pipe diameter as large as the vent size or larger. USING VENT PIPE SMALLER THAN THE VENT CONNECTION LIMITS THE REGULATOR'S INTERNAL RELIEF VALVE CAPACITY. The outlet end of the pipe must be protected from moisture and the entrance of foreign particles. The regulator should be specified by the user with the size vent and pipe threads desired to make the vent pipe connection.

START-UP PROCEDURE

Warning The seal caps for the main diaphragm cases must always be installed and wrench tight before introducing gas flow to the regulator and for as long as gas pressure is present in the regulator.

- a. Mount a pressure gauge downstream of the regulator to monitor the downstream pressure.
- b. With the downstream pressure valve closed, slowly open the inlet valve. The outlet pressure should rise to slightly more than the set-point. Verify there are no leaks and all connections are tight.
- c. The regulator was pre-set at the factory to match the order specifications. If regulator readjustments are necessary, the adjustment is made to the pilots only. While the regulator is under steady flow conditions of 500 cfh or more, remove the pilot regulator seal caps.

Caution Never remove or loosen the main diaphragm case seal caps while gas is present (under pressure) in the regulator.

- d. To increase the outlet pressure, turn each adjustment screw clockwise in equal increments until the outlet pressure is about 10% below desired gauge pressure. Adjust one screw clockwise to the desire outlet pressure. Turn the second screw clockwise until a slight increase in the outlet pressure is observed. Make slight counterclockwise adjustments to achieve the desired outlet pressure. Always set both pilots at the same pressure to keep both valves operating in unison.
- e. To decrease the outlet pressure, turn each adjustment screw counterclockwise in equal increments until the outlet pressure is about 10% below the desire outlet pressure. Adjust one screw clockwise to the desire outlet pressure. Turn the second screw clockwise until a slight increase in outlet pressure is observed. Make slight counterclockwise adjustments to achieve the desired outlet pressure. Always set both pilots at the same pressure to keep both valves operating in unison.
- f. Replace the seal cap and check for leaks after the desired outlet pressure is achieved.

The regulator is ready for operation.

SAFETY WARNING

This product, as of the date of manufacture, is designed and tested to conform to all governmental and industry safety standards as they may apply to the manufacturer. The purchaser/user of this product must comply with all fire control, building codes, and other safety regulations governing the application, installation, operation, and general use of this regulator to avoid leaking gas hazards resulting from improper installation, startup or use of this product.

ROOTS Regulators strongly recommends installation by a qualified professional and periodic inspection of pressure regulators (inspections may be required by local applicable codes or regulations).

Inspections should include checking for gas quality, cycle numbers, external environmental changes, and operating conditions that impact wear on the regulator's moving parts. To ensure safe and efficient operation of this product, replace worn or damaged parts found during inspection.

Limited Warranty

ROOTS Regulators are subject to the terms and conditions of the Natural Gas Solutions North America, LLC General Terms & Conditions For Sale of Products, Parts and Services, and no other terms shall apply, unless agreed upon by the parties in writing. The Natural Gas Solutions North America, LLC General Terms & Conditions For Sale of Products, Parts and Services can be found on the Dresser Utility website: dresserutility.com/forms-questionnaires-and-terms-conditions-sale.

Ordering Information

Specify:

1. Inlet and Outlet Connection Size and Type
2. Model Number
3. Outlet pressure desired
4. Pilot needed
5. Inlet pressure range
6. Type of gas and maximum capacity required
7. Assembly position number
(see chart below)

Special requirements such as tagging, 1/8" pipe plug tap, seal wire, etc.
