

# B34IMR OPCO Regulator

Commercial Regulator

Dresser ROOTS B34 IMR OPCO (Overpressure Cut Off) Regulators provide Utilities precise control of natural gas delivery with multiple forms of overpressure protection, eliminating the need to vent natural gas into the atmosphere.

With three (3) methods of overpressure protection, the ROOTS B34 IM OPCO Regulator is designed in such a way to reduce false trips.

- » Secondary Seat/Orifice – utilizing Roots™ IM (Internal Monitor)
- » External vent (optional)
- » OPCO/OPSO Actuator – legacy design with 20+ years in-field experience shutting off gas downstream without releasing gas into the atmosphere

## The B34 IMR OPCO Competitive Edge

- » The IM functions similar to an operator/monitor reducing the potential for false trips to take place
- » The IM has a legacy of over 50 years of proven performance
- » Compact set design with reduced leak points and a smaller footprint (compared to traditional operator/monitor set ups)

# ROOTS

## Model Description

The B34 IMROPCO regulator is a single valve body regulator with built-in monitor operation and overpressure shut off. It features three(3) forms of overpressure protection: the safety advantage of a second gas tight lock-up seat if the normal orifice face and valve seat fail to produce bubble tight lock up, an internal built-in relief mechanism and an overpressure shut off for abnormal failure modes.

- » The B34 IMRVOPCO regulator has the same features of the B34IMROPCO with an additional built-in signal for monitor lock up.
- » The B34IMNOPCO is a non-relief version for applications where relief is not an option.

## Features

- » Interchangeable brass orifice
- » 78 in2 of diaphragm area
- » Spring-loaded internal relief valve assembly
- » Field interchangeable adjustment spring
- » Equipped with an OPCO unit for catastrophic failures
- » Available with 1-1/2", 2" screwed & 2" flange connections

## Technical Features

Inlet pressure	<b>175 psig</b>
Outlet pressure	<b>4 iwc – 6 psig</b>
Operating temperature	<b>-20°F to 150°F</b>
Acceptable gases	<b>Natural gas, town gas, propane, butane, air, nitrogen, or any non-corrosive gas</b>
Safety devices	<b>Optional built-in safety shut-off valve: Over-pressure shut-off (OPSO)</b>
Options	<b>Tamper proof sealing Inlet pressure taps</b>

## Sizes & Connections

Sizes	<b>1-1/2" to 2" flanged</b>
-------	-----------------------------

## Materials

Body	<b>High tensile strength cast iron</b>
OPCO Head	<b>Pressed steel / UNI EN10025</b>
Internal parts & Pilot	<b>Steel, stainless steel, brass and aluminium</b>
Seals	<b>Nitrile rubber</b>
Diaphragm	<b>Synthetic rubber with fabric reinforcement</b>

## Benefits

- » ANSI Z21.80/CSA 6.22 certified
- » Offers the most safety features of any commercial regulator
- » Protects equipment from shock damage
- » Large 12" diaphragm for better outlet pressure control
- » Unmatched overpressure protection with three (3) forms of safety

Standard regulator and upstream monitor orifice.
