

Style 711 Bolted Couplings

For Seal & Restraining Joints on any combination of Steel, PE and Cast Iron Pipe

100% COMPLIANT TO DOT 192.281(e) - ASTM F1948 CATEGORY 1

Meeting all requirements of the Category 1 Code of Federal Regulations, Dresser has introduced an enhanced design upgrade of the Style 711 seal & restraining coupling product line.

The combination of components on the compression end(s) of the Style 711 product design results in a pressure seal while the metallic gripping mechanism locks the pipe against pull-out providing a complete seal and restraining connection.

Insert stiffeners for PE pipe in all SDR sizes commonly used in natural gas piping systems can be furnished by Dresser. Pipe inserts are color-coded to assist with the identification of proper SDR.

Style 711 couplings offer the convenience of an assembled stab product, essentially eliminating the component disassembly while helping to ensure proper installation. The Style 711 coupling is supplied with AL-CLAD™ epoxy coating as standard. Applied under rigidly controlled factory conditions, this coating offers quality and integrity unlike any field-applied coating.

For Steel, PE and Cast Iron Connections

- Straight couplings, insulating and conductive
- Reducing couplings, insulating and conductive
- Flange Adapters
- Line Caps

Style 711 Conductive Coupling

Style 711 conductive couplings feature armored pinned gaskets for cathodic protection, while 4140 carbon steel slotted grip rings provide pipe restraint. Middle ring and followers are constructed of mild carbon steel or ductile iron. All Style 711 products are provided with AL-CLAD fusion-bonded epoxy coating as standard.

Style 711 Insulating Coupling

Style 711 insulating couplings offer the same seal and restraining principle, but feature insulating characteristics. PPO thermoplastic follower insulators, PP body insulators and HDPE/PVC pipe end spacers provide electrical isolation when joining dissimilar alloy or vintage metallic piping.

Style 711 Bolted Couplings for PE to PE*, PE to Steel and Steel to Steel Connections

Conductive Sizes 1-1/4" - 12"
